   4.1 A shock absorbent surface must be used as the landing area to allow for a stable landing on the feet. If two or more mats are joined together to form the landing area:
      4.1.1 They must have the same height and density.
      4.1.2 They must be held firmly together so as not to separate in use.
      4.1.3 On top of the landing mat, an additional landing mat may be used by the competitor. (sting mat)
   4.2 Dimensions of the landing area must be:
      Length 6m minimum
      Width 3m minimum
      Thickness 30cm +/-10mm

5. Landing Zone
   5.1 A landing zone must be marked out in the landing area with either the whole zone in a contrasting color or with lines 50mm (2") wide in a contrasting color. The outer edge of the landing zone (or lines) marks the boundary of the landing zone.
   5.2 Dimensions of the landing zone must be:
      Length 4000mm (13') +/-5mm
      Width 2000mm (6.5') +/-5mm

6. Run-Up:
   6.1 There must be a run-up of 10m (33') prior to the tumbling track. It must be the same level as the tumbling track. Competitors must start their run no further than the designated 33' run-up.

7. Measurements of the take-off zone
   7.1 The lines of the zone can be Velcro, tape or paint. Lines must be at least one inch (1") in width: White for the take-off zone and red for the penalty zone. The penalty zone must be solid red or striped in red.
   7.2 Penalty Zone: One foot (1')
   7.3 Take-off Zone: Eight feet (8') with seven lines spaced evenly one foot (1') apart within the take off zone. The white line on the 9' mark should be the width of the rod floor.

8. Safety Mats
   8.1 Carpet bonded foam or equal thickness matting is required to cover the entire length of the tumbling floor to the front of the landing area.
   8.2 Side mats are required to be 6' wide.
   8.3 One 5'x10'x8" mat is required on the floor beyond the back of the landing area. This mat should be “tethered/Velcro adhered” to the landing area.

9. Sting Mat
9.1 On top of the landing area the competitor may use an additional mat of 10 cm. The size of the additional mat must be 4m x 2m at 10cm (size equal to the landing zone.) Competitors assume the risk of using this additional mat and will not be granted a second attempt if the mat causes a fall.

3. DMT Specifications

1. Frame

1.1 No metal bars or other firm fixing are allowed across the ends of the double mini-trampoline other than at floor level.

1.2 The profile of the frame must have rounded edges.

1.3 Safety padding

1.3.1 Carpet bonded foam or equal thickness matting is required to cover the entire length of the double mini-trampoline sides to the back of the landing area.

1.3.2 Side mats are required to be 6’ wide.

1.3.3 One 5’x10’x8” mat is required on the floor beyond the back of the landing area. This mat should be “tethered/Velcro adhered” to the landing area.

1.3.4 The frame and springs must be entirely covered by shock absorbent padding, the maximum thickness of which must not be greater than 55mm. The padding must not cover any part of the bed.

1.3.5 The padding should be firmly fixed to the frame without hindering the normal action of the bed and springs, nor should it cause noise during the course of the pass.

1.3.6 The bottom of the padding at the side of the bed should not protrude above the level of the bed by more than 50mm.

1.3.7 The bars beneath the bed must be padded. The frame ends on the dismount end must be covered with 50mm pads firmly joined together with the other padding.

2. Bed

2.1 The bed must be constructed from light colored bands, webs, strings, etc., which must be held together in such a way that they are not displaced during use.

2.2 Dimensions of the bed under tension:
